STATE ENGINEER

EXHIBIT "A"

Water will be used for hybrid cooling in a 100 Megawatt solar energy park. Wells will not operate simultaneously unless the production rate of the wells is very low. It is anticipated that the wells will be pumped independently of each other and pumped to an 800,000 gallon storage tank. Water will be used for industrial cooling during the months of May, June, July, August and possibly September depending on the weather. The plant will be air cooled during the balance of the year.

This application is being filed simultaneously with another application on the same permit so as to have two sources. The total combined diversion rate and combined duty shall remain the same as the underlying base permit.

Acreage is being stripped at the rate of 3.7 AF/AC as per consumptive use publication. The diversion rate and duty on this application reflect the pro-rata reduction.
